Honeydew: Browser automation framework. Perl, PHP, AngularJS, Saucelabs: Appium & Webdriver

- Developed an in-house Cucumber analog into a cross-browser automation suite, including iOS/Android support via Appium
- Created monitoring system to alert when critical production functionality tests failed
- Authored front end in AngularJS: autosuggests, debounced searches, websockets for realtime interaction, per-user default settings, and general widespread usability improvements

Kabocha: ReST API Testing framework. Perl, PHP/jQuery, MongoDB

- Created a custom framework to perform automated tests on our internal REST APIs
- Created a UI where other QA engineers can execute project tests

Squash: Site crawler. Perl, MySQL

- Scanned multiple production websites (over 1.5 million pages each night), produced daily email reports
- Stored all data in DB for trend analysis: comparing builds, or the performance of a single page, etc.

Manual QA Testing: JIRA, Confluence

- Performed manual cross-browser testing on a daily basis
- Tested stories and documented bugs in JIRA with extensive screenshot and video evidence
- Composed regression documentation from bugs and product requirements
